EURUSD 5M (2014) **EU Debt Crisis**

ARCH Macro/Robo Analysis & Advisory Summary for Fund Improvement –

VTR-00001-001-##-#-####-####-##

- ❖ **Hazardous Trap** - the trading algorithm struggles whenever encountering a market “turbulence” - or entering an “uncertainty trap” of murky situation, marked by a developing hangover period of high instability (> 0.9) before a big downturn or a huge breakout upside.
- ❖ **Simple Solution** – halt the trading program and close opened trade positions whenever the instability index exceeds the level of 0.9 or 0.8, and restart the trading program as the instability index falls below 0.7 or 0.6, depending on the fund manager’s risk tolerance.
- ❖ **Sophisticated Solutions**
 - **Extra Indicator for Non-equal Bet Tactics** – add the instability index as the fourth tactic indicator. When the index is high, reduce the number of contracts put on the bet, and vice versa.
 - **Leverage Ratios by Instability Integral** – decide the leverage extent of the fund by the sum of the daily instability indices inside a time moving window.
 - **Hedge/Leverage with ETF Options** – accumulate option straddles of currency ETFs with strikes near equilibrium levels when the instability index hangs over the 0.9 level.
 - **Trading Margin Allocation of Multiple Pairs** – Weights of trading balance on the pairs to be dynamically determined by the Instability Integrals.
- ❖ **Macro Discretionary Senses** – check the macro events on WALL at the market dots.

Overall : a very solid investment vehicle for institutional investors if systemic risks managed!

Trillion-Dollar Q:

How our AI (SEMA) assists fund managers via VOYAGER terminals to

- ❖ calibrate hardcore trading algorithms/machines,
- ❖ build softcore cybernetic trading teams/systems/principles
- ❖ maintain robust connections with investors on market rationales.

The Service – Macro Voyage as the service package

Hardcore Machine Trading SOP & Softcore Human Interactive Value-Added Services

❖ Platform of Plug-in Services – Voyager Terminal & Game Grid

❖ Macro Voyage Core-Service Framework & SOP

➤ Strategic Case-study Training Modules of Historic Lessons

➤ Algo-Trading Back/Stress-Testing through Cycles/Turbulences

➤ Tactical Hedging with High-Freq Instability Indices on Game-Grid

➤ Strategic Hedging with Low-Freq Instability Indices on Game-Grid

➤ Cross-Asset Hedging Strategies/Tactics in GDAA Framework

➤ Systemic Risk Hedging Strategies on Game-Grid

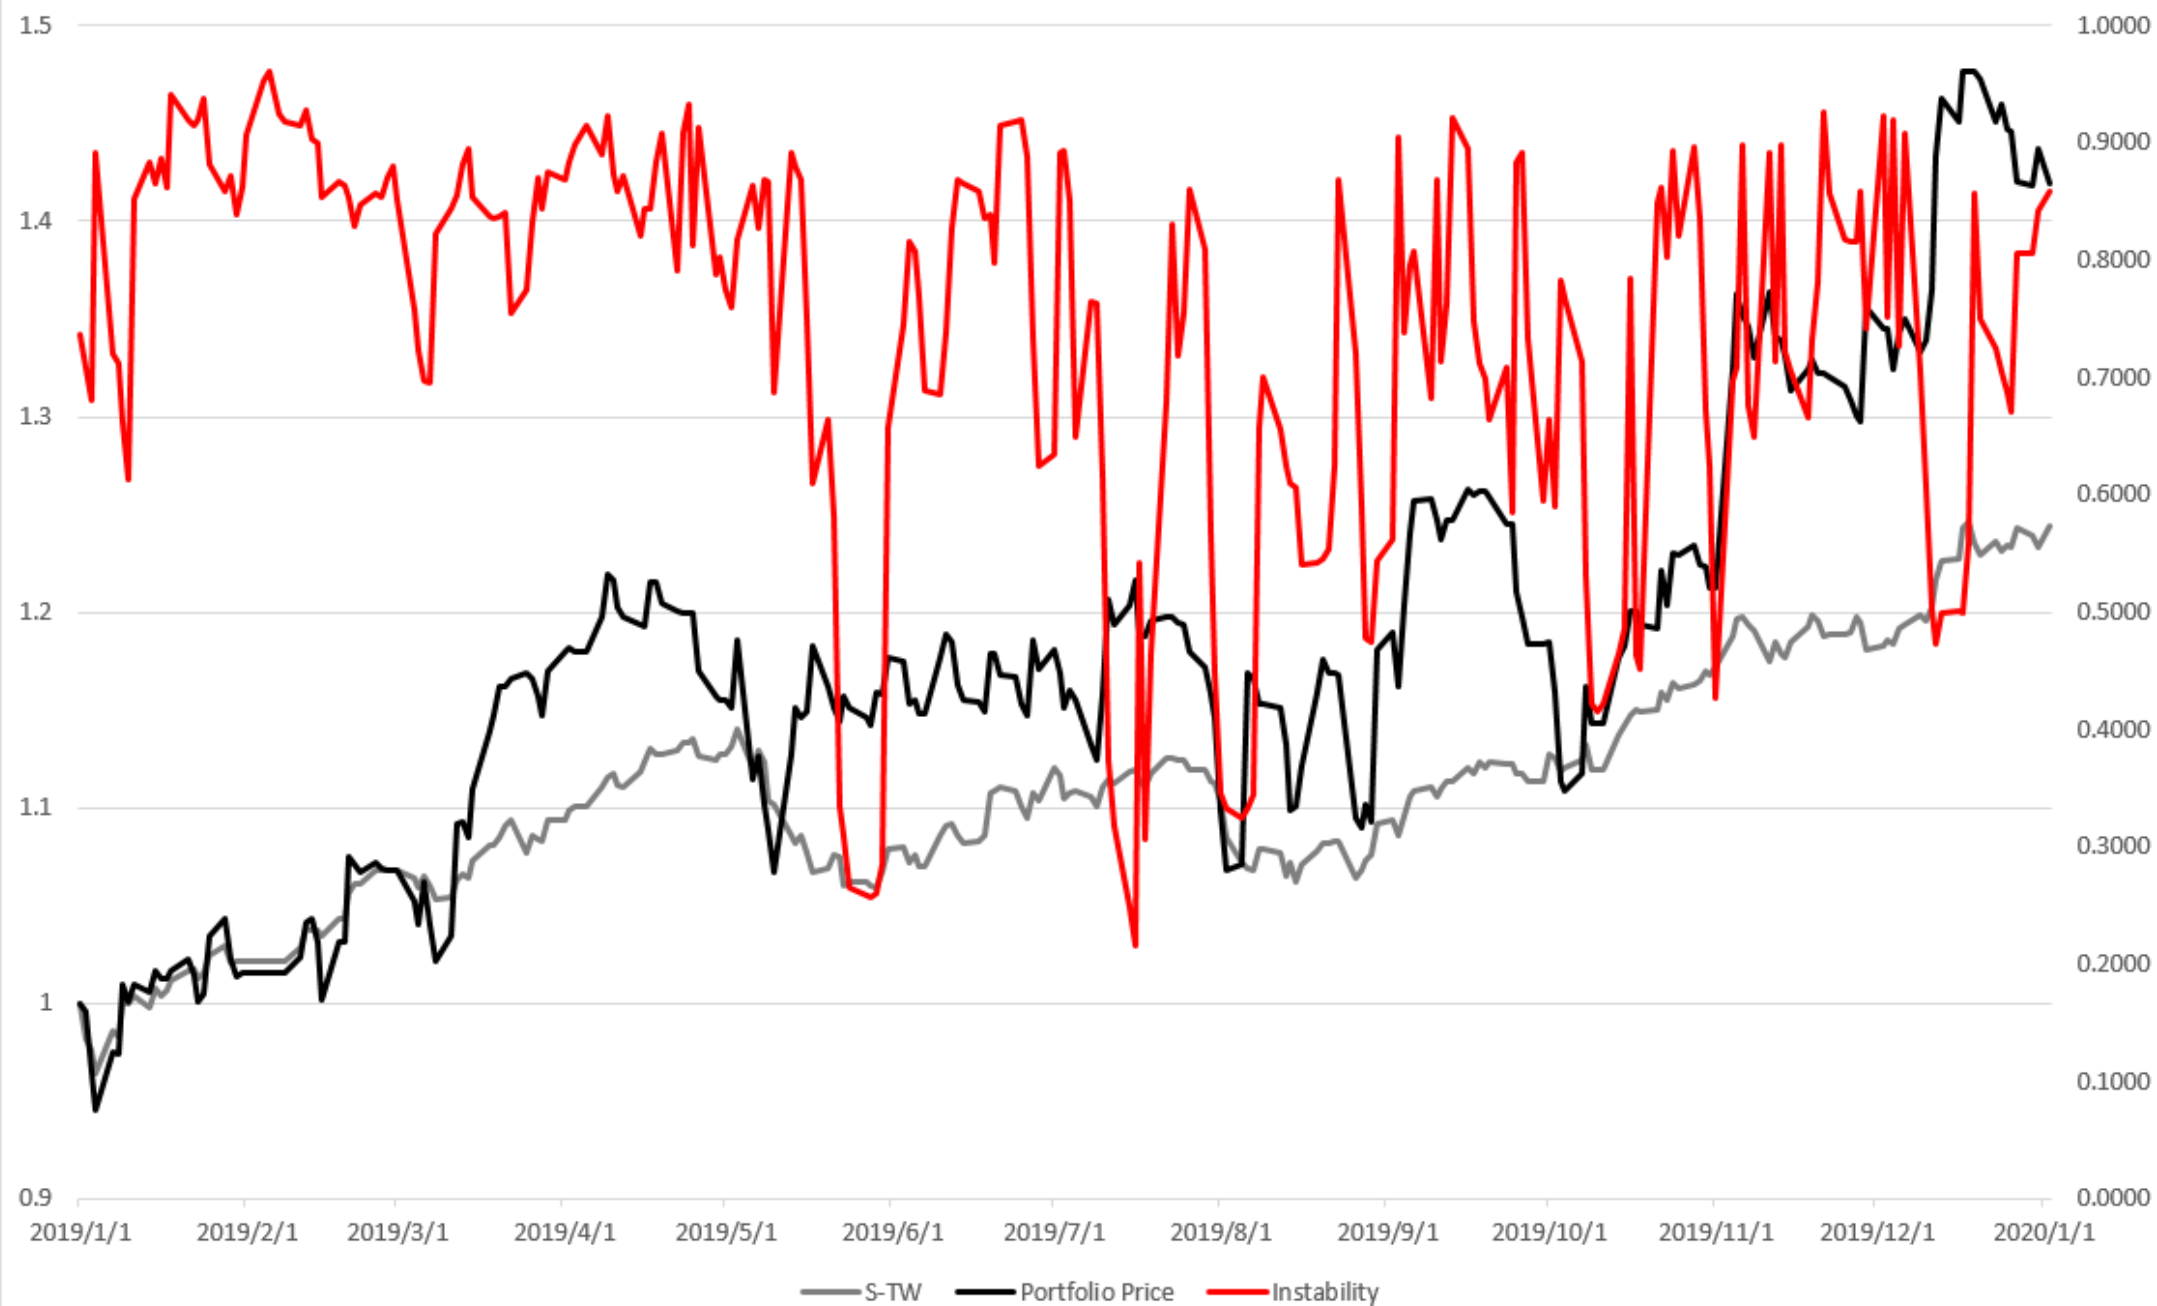

➤ Contour/Cascade of Allocation of Double/Triple Hedging Options

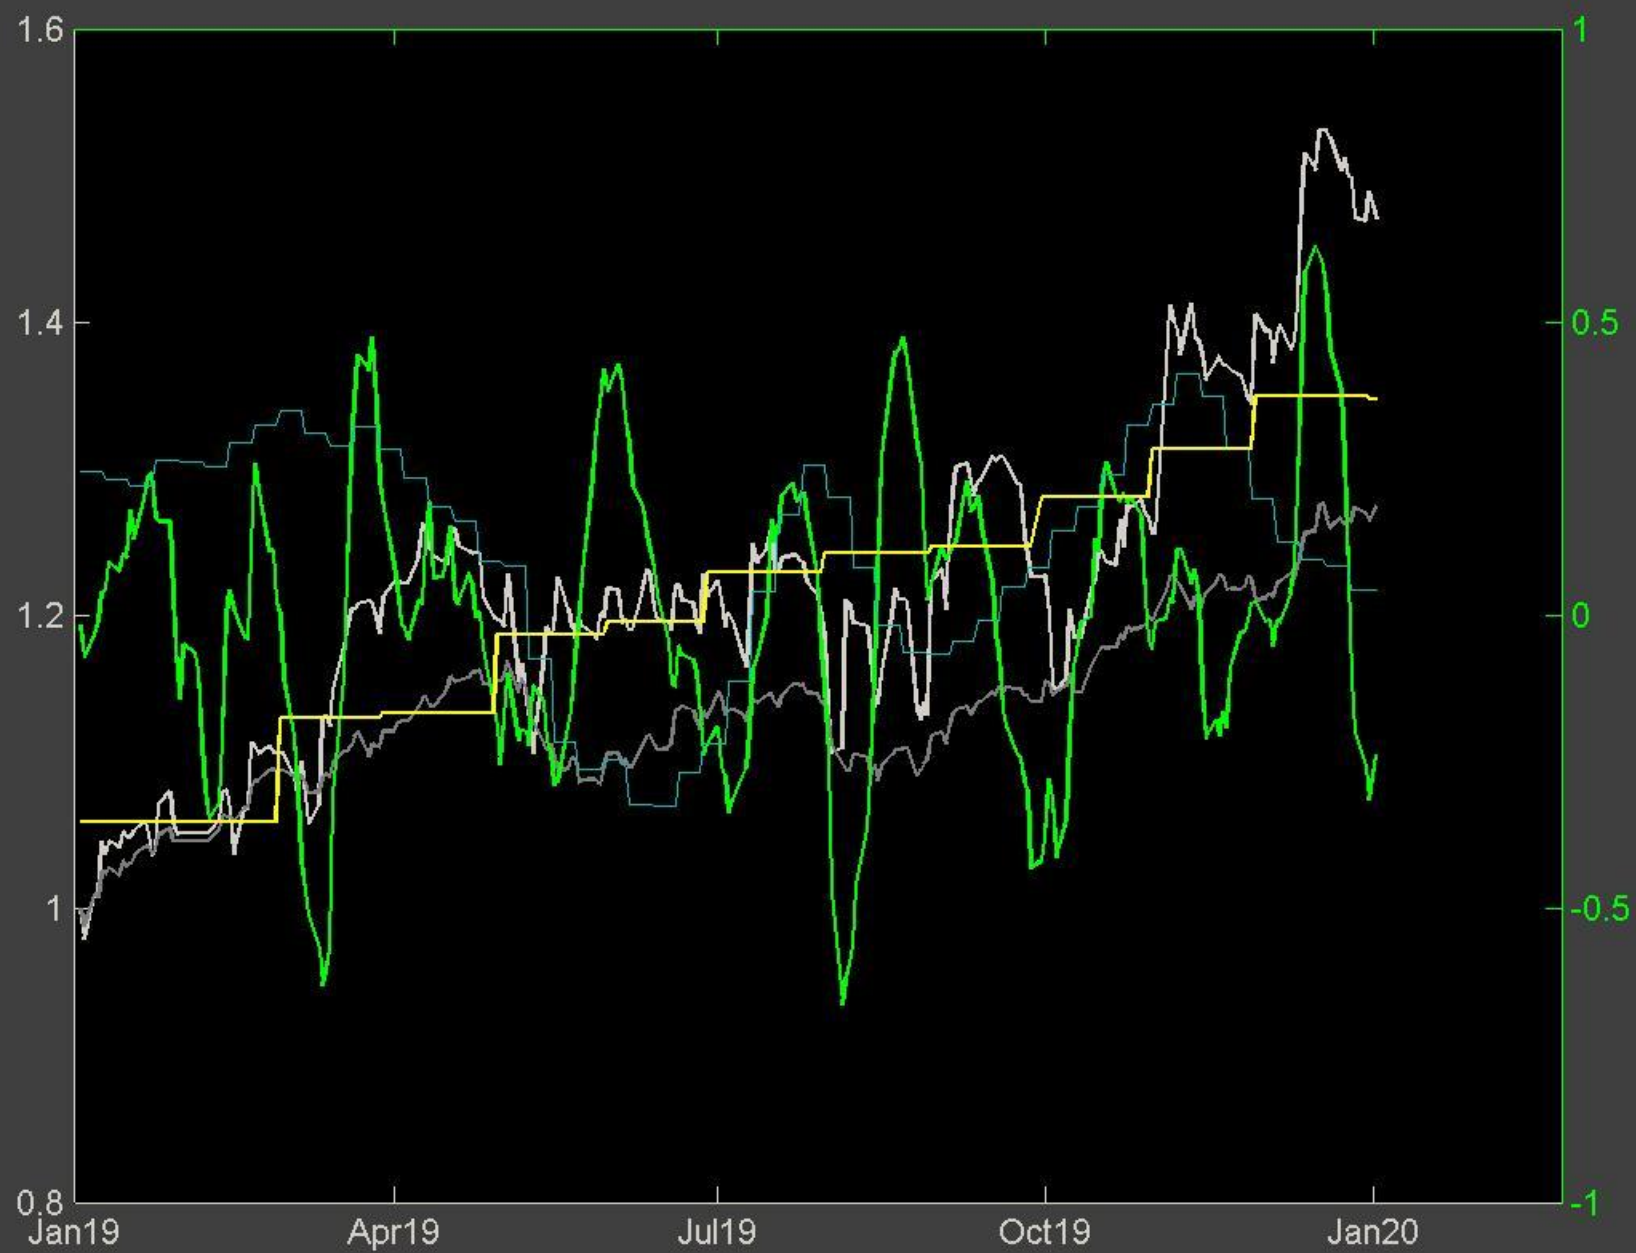

❖ AC Network - Share-Options of Long-Term Partnership for Alpha-Testing Clients

❖ ARCH - Fund Investor Relationship Management (IRM) Portal

❖ BlackKnight - Macro/Robo Trading/Advisory Team-Building/Training Program

寄給 我

2020年1月31日 上午7:26 (7 天前) ★ ↩ ⋮

Dr. Jeng,

已經完成Jack提供的投組跟不穩定指標的圖。

然後先說明一下~因為你可能也會發現(尤其2018年)
就是 (不穩定指標+價格走勢) 跟 (PDI+價格走勢) 會覺得兩張的價格走勢不太一樣
因為PDI的線圖是沿用之前已經解好的程式,是預設260個交易日
(不穩定指標+價格走勢) 我是用實際日期年頭到年尾
所以會有大概1-2天的差異
先跟你說明一下。

Best,

Selena
